The operation of AV-IN and AV-OUT

### Q&A

### ►Why does the device come with files?

These files are saved for demonstration adn the user could delete them.

#### **► Cannot Power On**

Please make sure the battery is fully charged and connected with the device properly. Many people install the battery reversely, contacts of the device are not connected with contacts of battery, the device can not get the power from the battery to run the system, so please make sure the battery is installed and connected with the device well.

#### **▶ Battery Charging**

- The battery is fully charged when the red LED light blinks for one second and then turns off.
- 2.If you can not charge the battery for the first time use, please check whether the battery is installed properly. We recommend to charge the battery fro at least four hours at the first time to make sure the battery is fully charged.
- 3.After the battery is charged or the device used for thirty minutes continuously, the device will cause some heat, which is a normal charge or discharge phenomenon.
- 4.If the battery icon blinks when the device is on, it means low battery, please recharge the battery or replace with another one.
- 5. The unit is bundled with a high-

quality battery. If you would like to purchase a new battery, we recommend to buy a high-quality one with same spec, to maintain good operation of the device. We do not recommend to use a low-cost/quality handset charger to charge the battery. Some electric appliances are not protected by an overload design and will shorten the battery life.

#### ► Cannot use the Inserted SD/MMC cards

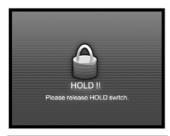

If you cannot use inserted SD/MMC cards, please check following points. 1.Please check if the memory card is damaged. If the memory card is damaged, please replace with a new one. If the card is in good condition, but can not be read by the system, it may be caused by the broken chip-controller or card locked. If the memory card is locked, please contact the memory card supplier for a solution.

2.For better performance, suggest to format the memory card before operation. Please enter Detup mode, menu list and proceed the format option to format the memory card on the device. To format the memory card on PC, please use FAT file system.

#### ► Cannot play ASF(MPEG4) file on PC

In Windows system, suggest to play movies by Windows Media Player. In Mac system (Above OS 10.x), suggest to play movies by VLC Media Player.

Hold Key

#### ►No function on buttons

Please make sure if the Hold Key is switched on (Arrow direction). This hold function is designed to prevent operating by mistakes in playing and recording modes. If the system display a message as the above image shown when the user power on the device, that means the Hold Key is switched on, please release the hold key for correct operation.

#### ► Cause Heat at operation

The device will cause heat at power recharging status and play continuously for thirty minutes, it's a normal condition.

#### ► Longer music playing

The user could purchase a higher capacity NP-60 battery.

#### ► Moselc in AV-In mode

Please change to high-speed SD card and enlarge the resolution.

#### ►The recorded movie become too bright

Please adjust the brightness or contrast of AV-IN video source to get a normal video quality.

The 4G SD card had been tested and worked very well on the device, but it may have compatible problem with the device due to brands and released timing, so 4G SD card is not listed as an official supported card capacity.

### ►WHy does the file size become large after convert?

The compression level of original file is different from supported format, the file size might become large during decode and encode process, it is caused by compression method/level.

### ► What to do when the device shut down?

Improper operation might cause the device shut down. If the device can not be powered on/off, please open the battery cover to reinstall the battery, then trun on the device and the system works again. In case SD card or some files are broken, it may also cause the device shut down, please replace a new SD card or delete broken files for correct operation.

#### > Warranty

The user/distributor is prohibited to open the device for repair or any other reasons or the warranty will be cancelled. If defective points are not caused by human-error, the make/ supplier is responsible for free repair in warranty period. After the warranty period or out of the warranty range, the material and service costs will be charged upon the agreement of the user.

#### product Specification and Function

- 1. Movie Player
- 2. Photo Album
- 3. Slide Show
- 4. Music Player
- 5. Voice Recorder
- 6. Browser
- 7. SD/MMC card reader
- 8. USB Disk
- 9. AV Recorder

Specification		
TFT LCD	2.5" LTPS TFT LCD 262K colors, 960X240 pixels	
Interface	Mini USB, Earphone ports (Multifunctional)	
TV system	NTSC/PAL	
Photo Print	support DPOF (Digital Print Order Format)	
Storage Memory	SD/MMC card (32MB~2G)	
Photo format	JPEG (EXIF2.2)	
Movie format	ASF (MPEG4)	
Voice record	WAV (ADPCM)	
AV-In Record	ASF (MPEG4 simple profile)	
Music Play	MP3/WMA (WMA do not support DRM)	
Power	Rechargeable Li-ion battery, NP-60 at 3.7V	
Adapter	DC 5V 1A (mini USB port)	

Product dimension		
Weight (g)	96g (without battery)	
Length (mm)	82mm	
Width (mm)	68mm	
Height (mm)	16mm
